

Insertar producto

```
16
17 @Path("producto")
18 public class ServiciosProducto {
19
20     //METODO INSERTAR
21     @Path("insertar")
22     @POST
23     @Consumes(MediaType.APPLICATION_JSON)
24     public void insertar(Producto producto) {
25         System.out.println("INSERTANDO PRODUCTO..." + producto);
26     }
27 }
```

The screenshot displays the Postman interface for a REST client. The workspace is named "EDWIN CUSIN's Workspace". The selected collection is "Testkrakdev", and the specific request is "reto38_Insertar". The request is a POST to the URL "http://localhost:8080/inventario/restws/producto/insertar". The request body is in JSON format, containing the following data:

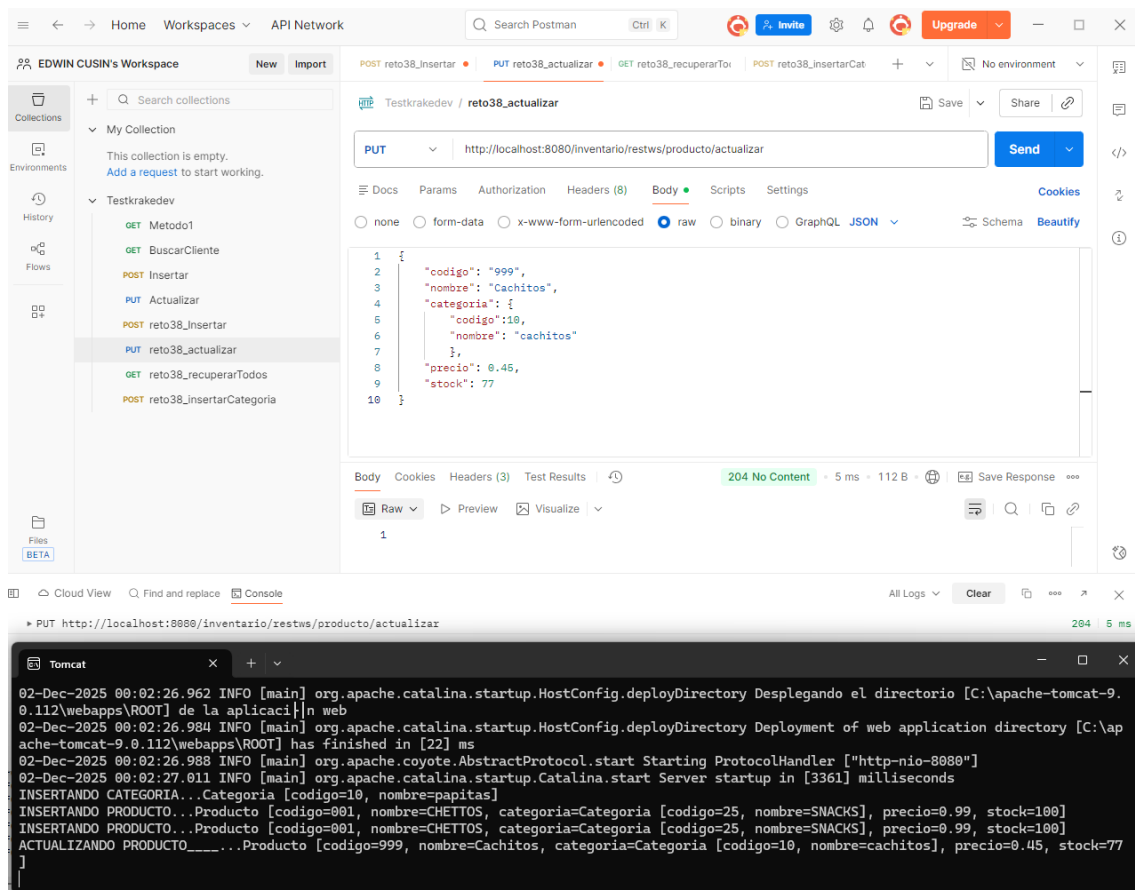

```
{
  "codigo": "001",
  "nombre": "CHETTOS",
  "categoria": {
    "codigo": 25,
    "nombre": "SNACKS"
  },
  "precio": 0.99,
  "stock": 100
}
```

The response is a "204 No Content" status, indicating a successful operation. Below the Postman interface, a Tomcat log window shows the server's output, confirming the insertion of the product:
